## Executive Summary

This publication is part of a series dealing with local communities which were predominantly Gaelic speaking at the end of the $19^{\text {th }}$ century. Based mainly (but not exclusively) on local population census information the reports strive to examine the state of the language through the ages from 1881 until today. The most relevant information is gathered comprehensively for the smallest geographical unit possible and provided area by area - a very useful reference for people with interest in their own community. Furthermore, the impact of recent developments in education (namely teaching in Gaelic medium and Gaelic as a second language) is analysed for primary school catchments.

This volume looks at the past and contemporary state of Gaelic in the north-western townships on the Isle of Skye. The crofting communities on the Trotternish, Duirinish and Minginish peninsulas have experienced substantial economic and social disruptions in the past which took their toll also from the Gaelic language community. Only during the last two decades economic conditions have improved and population figures are rising again. Prospects for the maintenance of Gaelic as important community language in this part of the island are no longer as gloomy as they used to be. This is especially the case in Trotternish with roughly $60 \%$ of primary school children attending Gaelic medium classes in Staffin and Kilmuir. The settlements on Waternish and around Dunvegan also show some signs that decline has almost arrested. On the other hand, local conditions in Glendale, at Edinbane and the entire Minginish peninsula are far less satisfactory and bode not well for the future.

## Foreword to the First Edition

Since 1881 every decennial population census in Scotland included a question about the "Gaelicspeaking" population. Despite some difficulty in interpreting this data (what really means to tick a box being able to speak Gaelic) this long-term data set holds a wealth of sociological and historical information. The series highlights the circumstances in which people speaking this Celtic language have lived and still live today. In most cases this data has been used only either for very problem-specific so-cio-linguistic studies or they were the basis of regional or Scotland wide analysis. However, it proved very difficult for people who were interested in their own local area to have a comprehensive overview of the number and distribution of Gaelic-speaking people right on their doorstep. This series is planned to cover all regions of Scotland where Scottish Gaelic (A'Ghàidhlig to be correct in its own words) was still spoken by a substantial part of the population at the start of the $20^{\text {th }}$ century. Accordingly, besides the main "Highland counties" of Sutherland, Ross \& Cromarty, Inverness and Argyll the fringe areas of Bute (including the Isle of Arran), western Caithness, Nairn, North Dunbartonshire and more particularly Highland Perthshire will be covered. It is hoped that these small reports will be of interest not only to science people but also to those who have to cope with opinions like "Gaelic was never spoken here" in their own local community.

## Foreword to the Second Edition

Almost two years have passed since the publication of the first volume of this series. In the meantime, a lot of "new" material has surfaced which merits to be publicised to a wider audience. In addition, two years are sometimes a very long time when looking at the actual state of a dynamic process: the reanimation of Scottish Gaelic in a number of places. Therefore, a second edition of the series is now being elaborated. Hopefully it will prove to be as popular as its predecessor.

## Foreword to the Extended Second Edition

I am very glad to present an extended and actualized edition of the Gàidhlig Local Studies after more than two decades since the first publication. Of course, new data and information had been waiting to be incorporated in this compendium of language development in Scotland. Maybe rather unexpectedly, many additional figures from the past became available, too - especially from the 1881, 1911 and 1981 censuses. As always, I wish happy reading - a few surprises wait to be discovered!!!!!

Important note: Although this text is written in the modern lingua franca for the purpose of maximum readership the object has to take its rightful place. Therefore, Gaiidhlig placenames or expressions are preferred, and the socalled English version is mentioned in brackets where appropriate. For those unfamiliar with the language: Every Gaelic expression is written in italics and the other place names are mainly examples of anglicisation efforts of early cartographers.

## Acknowledgements

The author is indebted to many organisations which have been very kind in providing information about the subject. I am very grateful for this active encouragement. Very special thanks go of course to the General Register Office for Scotland for the opportunity to use the census material in this study. The team at the Demographic Dissemination Branch has been very supportive. Crown Copyright on the census data is acknowledged gratefully. Very worthwhile was also the relentless assistance of Mrs. Melissa Barlow of the University of Texas and Mrs. Liz Mackie of the University of Aberdeen who both proved to be very successful in unearthing rare material of more than a century ago. And last but not least thank is also due to the many individuals with whom I spent endless hours of discussion witnessing true Highland hospitality. Tapadh leibh a h-uile duine!

## 1 Introduction

This report is looking at the conditions of Gàidhlig-speaking in the north-western parts of An t-Eilean Sgitheanach (Isle of Skye) namely the peninsulas of Trondairnis (Trotternish), Diùirinis (Duirinish), Bhàtairnis (Waternish) and Minginis (Minginish). Roughly 4,200 people lived here in small townships scattered around a huge area of 104,000 hectares in 2001. Until very recently these areas were overwhelmingly Gàidhlig-speaking and crofting was the main backbone of society and economy. Both factors are still important nowadays but to a considerably lesser degree.

Within the last few decades, the economy has diversified considerably, and the tourism industry has become the number one employer on the whole island. Nevertheless, the crofting system in the townships enables many islanders to stay on the island and earn a living in combination with other part-time occupations. The proximity to the mainland and the scenic beauty have attracted many newcomers in recent years. After a century of population decline a substantial number of people from other parts of the country began to settle on the island and since 1981 the population is rising again. Socially this development has put a severe strain on the availability of housing affordable for most "locals". This problem was enhanced additionally by the rising number of second homes which are occupied only a few weeks in the year. Most of the new islanders choose attractive locations outside the island centres and in many places the locally born people are in a minority position. This fact has strong repercussions for the make-up of the local communities and the role of the traditional local vernacular Gäidhlig. Today the spatial distribution of high and low incidence of Gàidhlig-speaking therefore is more influenced by the number of outsiders rather than by different attitudes of the locals towards Gàidhlig say in Gleann Dail (Glendale) or Stafainn (Staffin). Especially in the north-western parts of the island more or less separate communities can be distinguished. One community is made up of locally (or nearby) born Scots which still speak Gàidhlig or in which the language is still used to a considerable degree in the family. The other group is represented by the monoglot English-speaking incomers who have settled only recently and who are very often occupying their houses for part of the year only.

Until the 1970s the whole island was part of the County of Inverness-shire. With local government reorganisation it became part of the large local authority of Highland. This change had a very strong positive impact on the status of Gàidhlig both in education and public life. The almost universal presence of bilingual signs and the considerable popularity of Gaidhlig-medium education today are two obvious examples of a changed attitude towards the language both by official administration and the Sgitheanachs themselves.

The following short chapters investigate the historical development of the use of Gàidhlig in the area from the end of the $19^{\text {th }}$ century until today - mainly highlighted by references to and analysis of population census results in local detail. Information on additionally available studies of language use and especially educational provision to study (or even being educated through the medium of the language) is used where considered as useful. The area of interest is shown in fig. 1 for information ${ }^{3}$.

## 2 The Historical Background

An t-Eilean Sgitheanach (the Isle of Skye) is by any means still an important centre of Gàidhlig language and culture in Scotland. Especially in the north-western half of this large island the language has succeeded to withstand the trend for a long time. Even before official census authorities first recorded the distribution of Gàidhlig speakers around the country in 1881 there was sufficient information available about the wide and almost exclusive use of Gàidhlig in much of Scotland.

Of course, on all the Hebridean islands Gàidhlig was the general vernacular of the local population in the $19^{\text {th }}$ century. The New Statistical Account of Scotland (1831-1845) provides ample evidence of this fact. The parish minister of Cill Mhoire (Kilmuir) in the north of An t-Eilean Sgitheanach (Isle of Skye) reported for example: "The language both spoken and preached is the Gaelic. The higher orders, of course, speak English, and most of the young men understand it. Although the Gaelic has perhaps lost no ground for half a century back, yet it has suffered materially in purity. As the young men resort annually to the south country in quest of employment, they invariably acquire a smattering of English, many words of which, they unfortunately intermix, by a sort of pride, with their own emphatic and venerable language." The man showed the official attitude to the language in those days. And interestingly he was also a strong advocate of emigration after the landowners had cleared most of the land and local people were forced to live on small pockets of poor land in crofting townships along the coast. Security of tenure was only won after a hard fight at the end of the $19^{\text {th }}$ century (see below) after generations of people had left the country of their forebears.

Fig. 2: Gàidhlig-speakers (aged 3 and over) as percentage of total population between 1881 and 2011 - civil parishes of Cill Mhoire (Kilmuir), Sniosart (Snizort), Diùirinis (Duirinish) and Bràcadal (Bracadale) ${ }^{4}$

The language, however, remained strong even after World War 2. Only in the 1950s Gäidhlig began to lose ground through the combined effect of emigration, immigration, and insufficient language transmission between generations of Gàidhlig-speakers. This development can easily be anticipated in figure 2 which depicts the percentage of Gaidhlig-speakers in the four civil parishes of the area, Cill Mhoire (Kilmuir) and Sniosart (Snizort) being parts of Trondairnis. The following sections will look closer at the temporal evolution of the Gàidhlig speaking communities in this north-western part of An t-Eilean Sgitheanach.

[^2]
### 2.1 From Victorian times until the Second World War (Census 1881-1931)

In the final decades of the $19^{\text {th }}$ century severe social unrest characterised the life in the Scottish Highlands and the Hebrides. The power of landlordism had been virtually unchallenged until the 1870s leading to massive emigration and to the "resettlement" of the local population to congested, povertystricken townships located on the worst land. On An t-Eilean Sgitheanach some of the first and unquestionably spectacular protests were started when landlords once again wanted to raise their rents in the 1880s. Places like Cill Mhoire (Kilmuir), Gleann Dail (Glendale) and Na Bràighean (Braes) became soon synonymous with the land struggle. Public opinion soon went in favour of the unprotected tenants. Even Westminster had to react. It set up a Royal Commission on Highland Distress under Lord Napier. This commission not only investigated ways of solving the social problem but provided also proposals concerning the treatment of the local language. Among other recommendations they conclude: "We think that the discouragement and neglect of the native language in the education of Gaelic-speaking children, which has hitherto so largely influenced the system practised in the Highlands, ought to cease, and that a knowledge of the language ought to be considered one of the primary qualifications of every person engaged in the carrying out of the national system of education in Gaelic-speaking districts, whether as school inspectors, teachers, or compulsory officers" (Crofters Commission, 1883). Almost needless to say the Scottish Education Department ignored these findings totally.

The first census enumerations of Gàidhlig speaking inhabitants in 1881 reported the whole of the island as entirely Gàidhlig-speaking. More than a third of the population in the parishes of North-Western Skye did not even speak English in 1891 (table 15 and figure 3). In 1891 for example out of the 78 islanders of Soaigh (Soay) 76 were reported as Gàidhlig-speaking with 29 not speaking English. This was to change, however, very soon due to the impact of compulsory education in which "English only" governed classrooms and playgrounds. The Gàidhlig monoglot speaker was to be more and more confined to the elderly and pre-school children. The latter remained on a very high level on all islands of Inver-ness-shire (table 18) at roughly 75 \% for 3-4-year-olds until 1931. This meant that English was rarely spoken in normal households on the islands.

Before addressing the official enumeration district figures for 1881-1901 it is worth to look more closely at the original 1891 census forms providing interesting additional information. Generally, the census figures were still underestimating the real strength of the language because these statistics looked at the total population present at census night. The population figures included returns from occasional visitors and counted also children aged less than three years although their language preferences were not enumerated at all. The respective "corrected" 1891 details about three communities in this part of the island are cited below ${ }^{5}$ (Duwe, 2006):

1. Aoineart, Fiosgabhaig \& Talaisgeir (Eynort, Fiskavaig \& Talisker): In these remote hamlets of the Minginis (Minginish) peninsula Gadidhlig was almost exclusively used by the local population: "The district was a Gàidhlig speaking area as strong as anywhere to be found in the Hebrides in those days. Apart from one family at Talaisgeir all usually resident persons spoke Gàidhlig in this area. Around $40 \%$ of the population still did not speak English. Those monolingual speakers were to be found mostly among the pre-school children and the generation above 44 years of age. - Just three persons in the usually resident population in the area did not speak Gàidhlig according to the census files. These were all part of one family at "Tallisker House" where the local sheep farmer, his sister and brother did not have a " $G$ " or " $G \& E$ " marked on their registration sheets. However, all were born in the parish round about 25 years earlier. It is highly unlikely that they did not learn to speak Gäidhlig then. Therefore, it might be assumed that they did not speak Gàidhlig although they could do it. Their mother by the

[^3]way was bilingual and her birthplace was Uibhist a Tuath (North Uist). - In original census report terms, the district had a population of 172 persons of all ages. In total 88 enumerated inhabitants spoke "Gaelic and English" and 73 were counted as monolingual Gàidhlig speakers. This count led to an "official" share of Gàidhlig speakers of $93.6 \%$. This figure was an under-estimate of $4.5 \%$ compared with the more realistic figures used here which take into account only the usually resident population."
2. Lethallt, Cùl nan Cnoc \& Bhaltos (Lealt, Culnaknock \& Valtos): These communities in the parish of Cill Mhoire (Kilmuir) were thoroughly Gàidhlig-speaking: "Apart from a woman in Bhaltos who was counted as not speaking Gàidhlig the whole community spoke the language in this northerly part of the island. A significant proportion of the usually resident population still did not speak English with monolingual Gàidhlig speakers dominant among the very young and the generation beyond the age of 44. Quite revealing is the fact that the proportion of monolingual Gàidhlig speakers was almost independent of birthplace whether in the Gaidhealtachd or not. Such was the strength of the language in this district and the pressures to learn it seemed to be very high indeed in this period. - Just one woman was enumerated as not speaking Gàidhlig. However, the 28-year-old Catherine Martin was accompanied by two Gàidhlig monolingual household members: her father and her 23-year-old sister. Accordingly, even this "English only" return can only be described as doubtful. - In original census report terms, the district had a population of 359 persons of all ages. 209 enumerated inhabitants spoke "Gaelic and English" and 134 were counted as monolingual Gàidhlig speakers. This led to an "official" share of Gàidhlig speakers of $95.5 \%$. This figure was an under-estimate of $4.2 \%$ compared with the more realistic figures taking into account only the usually resident population."
3. Geàrraidh, An Cnoc Breac \& Na Gilean (Geary, Knockbreck \& Gillen): The state of the language in this part of Bhàtairnis (Waternish) is described as follows: "Apart from the teacher's family Gàidhlig was almost exclusively spoken by the usually resident population. Most crofters even did not speak English at all. Bilingual persons were mostly found among those aged between 15 and 44. All communities were reported as almost totally Gàidhlig speaking except An Cnoc Breac (Knockbreck) where the local school was situated. - Five inhabitants were enumerated which did not speak Gàidhlig. Of course, the schoolmaster and his wife spoke only English. They were born in the Lowlands. In addition, two children (aged 6 and 10) from Haddingtonshire lived with their crofting grandfather in Geàrraidh (Geary). This small group was completed by a three-year-old girl in An Cnoc Breac (Knockbreck) who did not have a " $G$ " or " $G \& E$ " marked on her registration sheet. - In original census report terms, the district had a population of 301 persons of all ages. 93 enumerated inhabitants spoke "Gaelic and English" and 191 were counted as monolingual Gàidhlig speakers. This led to an "official" share of Gàidhlig speakers of $94.4 \%$. This figure was an under-estimate of $3.8 \%$ compared with the more realistic figures taking into account only the usually resident population."

Table 2: Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Cill Moire \& Steinnseal (Kilmuir \& Stenscholl) according to local census data from 1881 to 1911

Detailed local information is available in census reports especially until 1911 providing a good impression of the geographical strength of the language in all parts of the area under scrutiny (see tables 2-5).

The civil parish of Cill Mhoire (Kilmuir) occupies the northern half of the peninsula of Trondairnis (Trotternish) encompassing many small crofting townships all along the coastline. Everywhere the population share of Gäidhlig speakers was well above the $90 \%$ mark. This meant that basically all local people above the age of two spoke the language. Many of the inhabitants did not speak English at all. These monolingual Gàidhlig speakers held the majority in four enumeration districts in 1891 (table 2). Even in 1901 the district of An Dig \& Flodaigearraidh (Digg \& Flodigarry) had more monolingual than bilingual Gàidhlig speakers.

[^4]| Number of persons and percentage of Gàidhlig-speakers in selected districts of Sniosart - 1881-1911 |  |  |  |  |  |  |  |

Table 3: Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Snìosart according to local census data from 1881 to 1911

The civil parish of Sniosart (Snizort) is basically the southern portion of Trondairnis (Trotternish). The census of 1881 did report a somewhat low intensity of Gàidhlig speakers in the area around Uige (Uig). However, it has to be kept in mind that at that time the question asked about people "habitually speaking Gaelic". In later censuses this result was not repeated and the whole area was returned as an overwhelmingly Gàidhlig speaking district. Quite striking was the share of monolingual Gàidhlig speakers in the enumeration district of An Tobhta \& Carbost (Tote \& Carbost) with over $80 \%$ of "Gaelic only" returns. In contrast there were only a few monolingual speakers reported in the vicinity of Uige (table 3).

As part of the civil parish of Diùirinis the narrow peninsula of Bhàtairnis (Waternish) further west nonetheless was even more remote in those days. It is therefore no surprise that in the enumeration districts of Geàrraidh \& Gilean and Dùn Hàlainn \& Halastra most people did not speak English at all in 1891 (table 4). Practically everyone above the age of two spoke Gàidhlig except of course some ignorant incomers as e.g. the teacher at the school of An Cnoc Breac (Knockbreck) as outlined before. The communities in Diùirinis (Duirinish) proper were also thoroughly Gäidhlig speaking in this period. Majorities of monolingual Gàidhlig speakers were still recorded in the westernmost districts around Miolabhaig (Milovaig) and Ramasaig in 1891.

Table 4: Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Diùirinish \& Bhàtairnis according to local census data from 1881 to 1911

The northern portion of the civil parish of Bràcadal (Bracadale) was divided into four enumeration districts by the census authorities (table 5). Basically, the whole area was also thoroughly Gàidhlig speaking with significant proportions of the people speaking Gàidhlig only. In 1891 this fact was most prominent in the district of Am Baile Meadhanach \& Os (Balmeanach \& Ose). In general, there can be no decline of any sort detected between the census results of 1881, 1891 and 1901 in any area.

Table 5: Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Bràcadal \& Minginis according to local census data from 1881 to 1911

The peninsula of Minginis (Minginish) was very thinly populated in this period. Only a few crofting settlements had survived the "Highland Clearances" and wide-open spaces were only "served" by lonely shepherd's or gamekeeper's huts. Nevertheless, most remaining communities were returned as thoroughly Gàidhlig-speaking. But incomers had already made an impact in places like Sligeachan (with its hotel) and especially Carbost (table 5). There, a number of people from outside the Gaidhealtachd were engaged in the Talisker Distillery. Only a few of them seem to have bothered to learn the language of their neighbours. Outside these anglicised places the use of Gàidhlig was still practically universal.

Even after 1901 Gaidhlig remained the dominant (or even exclusive) language of everyday life for virtually everyone in the area until the Second World War. The share of the Gàidhlig speaking population stayed at around the $90 \%$ mark in all censuses for all four civil parishes. There was even a marked increase in Minginis (civil parish of Bràcadal) due to the settling of a larger number of people from the Outer Hebrides in the 1920s.

[^7]

Fig. 3: Share of population speaking Gäidhlig and/or English in the study area according to census results in 1891, 1911 and 1931

This dominance in the home, however, was in stark contrast to the anglocentric world of school education. There was widespread criticism from well-informed and well-educated Gaels but almost to no avail. In 1936 a survey was taken by An Comunn Gaidhealach concerning the teaching of Gäidhlig in schools and eventually a number of proposals were made including: "Gaelic should, if possible, be taught to all children, whether native speakers or not, in Elementary Schools, ... in Secondary Schools, even outwith the Highlands, it should be given equal status with any other language in the curriculum" (An Comunn Gaidhealach, 1936). The reaction of the Inverness-shire Education Committee (which covered also Skye) was the most positive in all Highland counties but in practice "English only" ruled the day until the outbreak of the Second World War.

Apart from this psychologically very destructive onslaught by the educational system Gàidhlig still remained the dominant community language during the whole period. Therefore, Carl Borgstrøm met many very competent speakers in 1938 when he stayed for two months on the island for his famous linguistic study on the dialects of Skye and Ross-shire: "Skye Gaelic closely resembled some of the dialects already described by me in "The Dialects of the Outer Hebrides"." He mainly used material and information from people in Cill Mhoire (Kilmuir) and Bràcadal (Bracadale) as well as Aird Bhasair (Ardvasar) in the south of the island (Borgstrøm, 1941).

### 2.2 More Recent Developments (Census 1951-2011)

The disruption by the war and its economic aftermath resulted in a dramatic population loss in the peripheral regions of Scotland. The northern and western peninsulas of An t-Eilean Sgitheanach were no exceptions. Between 1931 and 1951 they lost almost $20 \%$ of their population. The language community suffered, too. The share of Gàidhlig-speakers fell from $91.4 \%$ to $83.3 \%$ in the area in a period of two decades with the northernmost parish of Cill Mhoire (Kilmuir) staying at a remarkable $90.1 \%$.

According to the report on Gàidhlig-speaking schoolchildren in Highland schools (Scottish Council for Research in Education, 1961) especially the north-western part of the island still had a remarkable number of young "mother-tongue" speakers in the school year of 1957/58. A staggering 179 of 262 primary school children were first or preferred language speakers ( $66.5 \%$ ) in Trondairnis; the corresponding figure for Diùirinis \& Minginis was 157 ( $72.0 \%$ ). Apart from relatively low percentages for the school districts around Dùn Bheagain ( 46.8 \%) and Uige ( 52.8 \%) Gàidhlig as first language was still the norm rather than the exception in the other scattered crofting townships. There were respectable percentages still in Stafainn (85.3 \%), Sniosart (70.5 \%), Bhàtairnis (88.9 \%), Gleann Dail (80.0 \%) as well as Bràcadal ( $81.7 \%$ ). Like in other Gàidhlig-speaking areas this was a one-sided affair. There were only a few fluent Gàidhlig-speakers coming from English-speaking homes on An t-Eilean Sgitheanach.

## Table 6: Number of Gàidhlig-speakers (3 years and over) in Trondairnis, Diùirinis \& Minginis (Trotternish, Duirinish and Minginish) and percentage of total population speaking Gàidhlig during 1951-2011

The census in 1961 saw virtually no decline in Gàidhlig-speaking intensity in the district. All parishes had massive majorities on a par with those recorded in the Outer Hebrides. The combination of emigration of many young islanders and a failing educational system took its toll, however, within the coming years. Between 1961 and 1971 the number and percentage of Gaiddhlig-speakers fell substantially (table 6) with the County Council Electoral Divisions (CCED) of Cill Mhoire (Kilmuir) and Diùirinis an Iar (Duirinish West) bucking the trend most satisfactorily (table 18). Even in young age groups (tables 20 and 22) the majority could speak Gäidhlig. The trend, however, pointed downwards because the younger generation was consistently less Gàidhlig-speaking than their grandparents.

In 1978 Highland Regional Council asked Skye parents whether they wanted bilingual education for their children "even if that meant pupils being bussed to other than their local school". The particular wording may have had an influence on the verdict of the parents; "only" $30 \%$ were in favour of placing more emphasis on the local language. The survey had been conducted due to the growing concern about the decline of Gaiddhlig and a desire for intervention to support the language at primary school level (Murray and Morrison, 1984). Nonetheless shortly afterwards Highland Region followed Comhairle nan Eilean's lead with its very successful bilingual project in primary schools of the Outer Hebrides. A bilingual education scheme was introduced in five of the twenty primary schools in North Skye (Stafainn, Cill Mhoire, Ceann Sàil Eighre, An Cnoc Breac and Borodail). This scheme was further extended to include all primary schools on the island in 1985. The initiative, although similar in aims and methods to the Bilingual Project, had to place greater emphasis on pupils who were not fluent Gàidhlig speakers (Dunn and Robertson, 1989). In figures 4 and 5 the effect of improved language teaching is clearly visible especially for the Trondairnis children.

From the 1970s onwards the social framework of the townships started to change considerably with a substantial influx of immigrants with an English-speaking background. This had of course a marked influence on the language balance. For example, since 1955 crofters in Gleann Dail (Glendale) were entitled to sell their holdings and this was increasingly realised in the 1970s. Accordingly a very high decrease in Gäidhlig-speaking intensity was recorded in western Diùirinis in the 1981 census. On the other hand, some overwhelmingly Gàidhlig-speaking townships were still left in the district with a share of over $80 \%$ speakers (tables 19 and 21). These examples included the communities of Stafainn ( $90.6 \%$ ), Steinnseal (85.0 \%), Flòdaigearraidh ( $89.5 \%$ ) and Cill Mo Luaig ( $92.2 \%$ ) in the far north as well as Port nan Long (83.2 \%) on Minginis.

Fig. 4: Percentage of children able to speak, read or write Gàidhlig in different age groups in 1981 Trondairnis

Fig. 5: Percentage of children able to speak, read or write Gäidhlig in different age groups in 1981 Diùirinis \& Minginis

In the coming years the population of the whole island rose by about $15 \%$. The improving economic situation kept a few more locally born citizens in the community. Main underlying factor, however, was a considerable number of retired or well-off citizens from the mainland who changed the make-up of a number of communities substantially. But the economic upturn had also a positive impact on the social self-esteem of the islanders which led to a more favourable position towards their own identity and language. Cròileagan were established, bilingual road-signs appeared all over the island and Gàidhlig was more and more used to "sell the place" to the important tourists.

Meanwhile a language survey was undertaken on the island to study the viability and languagemaintenance of the Gàidhlig speech community (Mackinnon, 1988). It found out during 1986/87 that Gàidhlig-speakers in the north-western part of An t-Eilean Sgitheanach used the language much more frequently than their counterparts in the rest of the island. In over $60 \%$ of cases, they still used the lan-
guage in the family as opposed to only about $40 \%$ in the south. Of course, this was considerably less than experienced in the childhood of their parents (over $80 \%$ ). Language maintenance was already weakening in this period. Another underlying factor of census statistics is of course the migration of people. So only $44 \%$ of those interviewed on the island were actually born on An t-Eilean Sgitheanach (making up $65 \%$ of Gàidhlig-speakers in the sample). Half of the remaining Gàidhlig-speakers originated from other Gàidhlig-speaking areas (namely the Outer Hebrides). In turn quite a lot of islanders returned to their place of birth after retirement and added to the increasing number of incomers which remained of course overwhelmingly English-speaking.

In contrast to many areas in the Outer Hebrides the principle of Gàidhlig-medium education proved to be very popular with local parents. GME was introduced in three primary schools of the area: Stafainn (1988), Dùn Bheagain (1990) and Cill Mhoire (1996). Pupils from southern parts of Trondairnis began also attending the nearby GMU in Port Righ which was opened as early as 1986. These positive developments had also some encouraging impacts in the 1991 census as the number of Gàidhlig-speakers did only fall slightly. Unfortunately, this fact was masked by a sharp reduction of the share of the population who spoke the local language. This effect was due to a substantial influx of incomers which caused an increase in population in this north-western part of the island from 3,503 in 1981 to 3,995 in 1991. Most of these newcomers came from England or overseas; the number of inhabitants who were born in Scotland rose only marginally from 3,127 to 3,200. At first sight this might appear to have had only negative implications for Gàidhlig. Contrary to former times, however, a remarkable number of those settling on the island were very much interested in the local culture. Generally, Gàidhlig was seen increasingly as an asset. Many newly settled young families (often from bi- or even trilingual nations) choose the bilingual option of Gäidhlig-medium education for their children. In Trondairnis in particular, GME soon played a very prominent role in primary school education with well over $40 \%$ of all children being educated this way.

Fig. 6: Percentage of Gàidhlig-speakers in different age groups between 1971 and 2001 - Area of Trondairnis (Trotternish)

The unit at Dùn Bheagain on the other hand managed to provide GME for roughly $20 \%$ of all pupils in Diüirinis. In the remaining primary schools, some second language tuition was given but with limited time and intensity. Minginis remained the district with the weakest educational provision for Gàidhlig.

All these developments in the younger generation were not sufficient to totally replace the number of overwhelmingly Gàidhlig-speaking islanders who passed away during the period until 2001. Therefore, all four parishes recorded a further decline in the intensity of Gàidhlig-speaking in the census of 2001 (table 14). Cill Mhoire (Kilmuir) with the best educational provision, however, lost only 59 speakers; the number of speakers in Diùirinis fell by more than 200 (see table 13). A more detailed analysis of the 2001 census is provided in chapter 3 of this volume.

Fig. 7: Percentage of Gàidhlig-speakers in different age groups between 1971 and 2001 - Area of Diùirinis \& Minginis (Duirinish \& Minginish) ${ }^{18}$

Between 2001 and 2011, there have been further positive developments with rising numbers in the Gàidhlig medium units (fig. 14). All primary schools were included also in the GLPS scheme which ensured a certain amount of second language teaching to all pupils in the area. In addition, in for example 2003/2004 26 pre-school children were enrolled at the age of 3 or 4 in the three Gaidhlig nursery units at Cill Mhoire, Stafainn and Dùn Bheagain.

However, this educational progress was not enough to stop the decline. The subsequent census of 2011 saw a further decrease of Gàidhlig speaking in the area. In tables 14 to 17 the most recent figures on civil parish level are given. The losses of speakers were almost on a comparable level in all parts of the area of investigation. Unfortunately, the local data about the age structure of the language community were not as detailed in 2011 as in previous censuses. In contrast to the previously used small output areas, in 2011 the somewhat larger data zones were used as smallest geographical area for age distribution analysis. Accordingly, a direct comparison with 2001 data is not always possible. However, the figures of Gaidhlig knowledge for the 3-15 age group and the total population is provided in table 7 for selected data zones. The intergenerational viability of these selected census data zones shows a very heterogeneous pattern. Whereas the locations in Trondairnis provided remarkable positive values of around $18 \%$, the data zones around Dùn Bheagain produced almost a zero difference in Gàidhlig knowledge between young age and the total population. Only the Minginis data zone of Carbost \& Fiosgabhaig returned a very disappointing $-9.0 \%$. But this was not unexpected due to the very poor school teaching history in the language.

[^8]A new feature in the 2011 census was a question about the language (other than English) used at home. This saw in this area more than $50 \%$ of Gäidhlig speakers living in households where the language was used. Especially strong was this aspect around Stafainn with $72.4 \%$, a value otherwise only found in the Outer Hebrides. This home language information is also provided in table 7.

| Census Data Zones | Trondairnis, Diùirinis \& Minginis - Census 2011 |  |  |  |  |  |

### 2.3 Development of literacy in Gàidhlig between 1971 and 2011

Information on speaking ability may paint only half the picture when considering the status and fate of a language in a community. Accordingly, it is very revealing to also consider data about Gàidhlig literacy which became available from 1971 onwards: At that time census questions were introduced on the ability to read or write Gäidhlig (see tables 7 and 8). An t-Eilean Sgitheanach was only marginally behind the Protestant parts of the Outer Hebrides in the reading category; the parish of Cill Mhoire even boasted a substantial figure of $84 \%$ of speakers being able to read Gàidhlig. This had much to do with the high profile of the language in Protestant worship. Through the years the reading ability remained on this very high level to this day. Improved education also boosted the number of people able to write Gäidhlig from some $38 \%$ in 1971 to almost $60 \%$ in 2001.

|  | Number of Gàidhlig-speakers <br> with ability to read Gàidhlig |  |  |  | Percentage of Gàidhlig-speakers with abil- <br> ity to read Gàidhlig |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 9 7 1}$ | $\mathbf{1 9 8 1}$ | $\mathbf{1 9 9 1}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 1 1}$ | $\mathbf{1 9 7 1}$ | $\mathbf{1 9 8 1}$ | $\mathbf{1 9 9 1}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 1 1}$ |
|  | 1050 | 925 | 808 | 708 | 572 | $76.9 \%$ | $75.6 \%$ | $74.1 \%$ | $74.1 \%$ | $73.8 \%$ |
|  | 970 | 829 | 662 | 515 | 375 | $70.3 \%$ | $72.5 \%$ | $65.2 \%$ | $72.1 \%$ | $71.3 \%$ |

Table 8: Number of people able to read Gàidhlig and Gàidhlig readers as a percentage of Gàidhlig-speakers for both areas (1971-2011)

|  | Number of Gàidhlig-speakers <br> with ability to write Gàidhlig |  |  |  | Percentage of Gàidhlig-speakers with abil- <br> ity to write Gàidhlig |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 9 7 1}$ | $\mathbf{1 9 8 1}$ | $\mathbf{1 9 9 1}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 1 1}$ | $\mathbf{1 9 7 1}$ | $\mathbf{1 9 8 1}$ | $\mathbf{1 9 9 1}$ | $\mathbf{2 0 0 1}$ | $\mathbf{2 0 1 1}$ |
| Trondairnis <br> (Trotternish) | 530 | 624 | 620 | 569 | 477 | $38.8 \%$ | $51.0 \%$ | $56.8 \%$ | $60.0 \%$ | $61.5 \%$ |
| Diùrinis \& Minginish <br> (Duirinish \& Minginish) | 525 | 590 | 475 | 408 | 295 | $38.0 \%$ | $51.6 \%$ | $46.8 \%$ | $57.1 \%$ | $56.1 \%$ |

Table 9: Number of people able to write Gàidhlig and Gàidhlig writers as a percentage of Gàidhlig-speakers for both areas (1971-2011)

Fig. 8: Persons able to read Gàidhlig as a percentage of Gàidhlig-speakers in Trondairnis in different age groups (1971-2001)

The impact of education can also be seen in figures 8 and 9 which illustrate the reading capacity in different age groups. Whereas the percentages stayed very high from secondary school age upwards the figures for those aged between 5 and 11 rose in Trondairnis after 1981 and in Diùirinis \& Minginis as late as the 1990s. The result provides a strong hint to when education started to teach primary school children to read Gàidhlig. In 2011 the same levels of literacy were recorded in the whole area.

Fig. 9: Persons able to read Gàidhlig as a percentage of Gàidhlig-speakers in Diùirinis $\boldsymbol{\&}$ Minginis in different age groups (1971-2001)

## 3 Digression: The Situation of 2001 in Focus

Census results for 2001 were the most comprehensive and detailed information base ever provided for Scotland. This was also true for the inclusion of questions on Gàidhlig language knowledge. Two new aspects were introduced:

1. Persons were asked whether they were „able to understand spoken Gaelic".
2. The language abilities of children under the age of 3 were enumerated.

IMPORTANT NOTICE: The more recent census data of 2011 were not as detailed as 2001 regarding generational differences in language use. Therefore 2001 is used here as baseline for research purposes. The following sections describe generally the distribution of language abilities (inter-generational and community by community) in both areas involved and the specific conditions of the younger age groups in individual primary school catchments (section 3.2).

### 3.1 General overview: Gàidhlig language capabilities in 2001

The presence of the Gàidhlig language in the two areas concerned is quite different; not least because in Trondairnis some $20 \%$ of inhabitants were born outside Scotland whereas in Diùirinis \& Minginis this percentage was $33 \%$ in 2001. Concentrating on the townships of Trondairnis (Trotternish) the following conclusions may be drawn from 2001 census information:

- Gaidhlig language abilities (fig. 10) are most common in the school generation and in old age. Roughly $25 \%$ of pre-school children understand the spoken language. The intergenerational difference (table 9) of Gäidhlig-speaking stood at only $-0.5 \%$, a very substantial improvement since 1991 when it stood at $-5.0 \%$.
- Nonetheless, a considerable decrease in Gàidhlig-speaking has occurred since 1991 in all generations. With the exception of secondary school age percentages were also down considerably in the age cohort of 3-24. Decline is evident at $-7.4 \%$ even at primary school age. It seems certain that apart from those pupils attending Gàidhlig medium classes almost no children knew anything about Gàidhlig let alone could speak it (see also section 3.2).
- The crofting townships in the north remained the strongest language communities. The detail of census output areas did show those being able to speak the language ranging from a share of roughly 66.9 \% in Steinnseal (Stenscholl) to some 32.6 \% in Idrigil (Idrigill). The figures for the „understands spoken Gaelic" category varied between around 74.1 \% in Steinnseal and some $38.0 \%$ in Idrigil. In 11 of 15 output areas there was still a majority who understood spoken Gàidhlig (table 24).
- Fig. 11 outlines that even in 2001 more than $20 \%$ of the population lived in neighbourhoods where over $65 \%$ of the people knew at least some Gàidhlig.
- Literacy in the language was still improving with $74.7 \%$ of speakers being able to read and some $60.0 \%$ of speakers able to write the language.
- In the new category of children aged less than 3 years 6 were enumerated $(9.8 \%)$ as being able to speak Gàidhlig and 10 ( $16.4 \%$ ) were counted as understanding spoken Gàidhlig. In addition to those able to speak Gàidhlig ( $47.3 \%$ of the population) 202 inhabitants were at least able to understand, read or write the language (10.1 \%).

[^9]

Fig. 11: Share of population living in neighbourhoods (census output areas) with different intensity of language knowledge in Trondairnis (Trotternish)

For the area of Diùirinis \& Minginis (Duirinish \& Minginish) the situation in 2001 looked slightly different. Whereas the overall intensity was less than in Trondairnis the intergenerational difference was now more positive:

- There was a distinct minimum in Gàidhlig language abilities in the working age generation (fig. 12). Approximately $15 \%$ of the pre-school children knew the language.
- The decrease in Gàidhlig-speaking by 15.9 \% since 1991 (table 10) was pre-dominantly but not exclusively confined to the older age groups. Also, in the age cohort of 3-24 the percentage of Gàidhlig-speakers was down by over $9 \%$. Some consolation may be that the intergenerational difference was turning in favour of the younger generation after a value of -6.6 \% back in 1991.
- The local detail of census output areas did show those being able to speak the language ranging from a share of 44.7 \% in Ròdhag (Roag) to some $17.5 \%$ in Colbost. The corresponding figures for the „understands spoken Gaelic" category reached their extreme values also in these townships between $60.5 \%$ and $25.2 \%$ respectively (see table 24 ).
- Fig. 13 shows that only a small part of the population lives now in neighbourhoods where the majority of people knew at least some Gàidhlig.
- Literacy in the language was still high with $72.1 \%$ of speakers being able to read and $57.1 \%$ of speakers able to write the language.
- In the new category of children aged less than 3 years only 3 ( $5.3 \%$ ) were able to speak Gàidhlig and 10 ( $17.5 \%$ ) could understand spoken Gàidhlig.
- In addition to those able to speak Gàidhlig ( $33.0 \%$ of the population), some 185 inhabitants ( $8.5 \%$ ) were at least able to understand, read or write the language.

### 3.2 Children with knowledge of Gàidhlig in primary school catchments

In the 2001 census information is available on very small enumerations districts: the census output areas. These local data can be used to look at the influence of local authority and parental attitudes towards Gàidhlig for the relevant age groups for even the smallest primary schools. For this investigation statistics have been aggregated for Gàidhlig language abilities at pre-school age (0-4), primary school age (5$11)$ and secondary school age (12-15). As an additional indicator a column is provided in table 11 with the age group of 24-35 which is meant to represent the language abilities of possible parents. Generally, the following conclusions may be drawn for the ten school catchments involved:

- Pre-school children: A substantial minority was reported as understanding spoken Gàidhlig. The highest returns came from the catchments of Cill Mhoire (Kilmuir) and Stafainn (Staffin). Both primary schools operated successful Gàidhlig nursery classes, and the townships were still the strongest language communities on the island. In many other areas including Dùn Bheagain figures showed some $20 \%$ of children already familiar with some aspects of the language. There were, however, primary school catchments which reported no pre-school children in this category. These were situated around Gleann Dail (Glendale), An t-Aodann Bàn (Edinbane) and on the Minginis peninsula. These locations once had strong Gàidhlig communities but nowadays with only a few Gàidhlig-speaking locals left.

Primary school children: The area boasted three very successful Gàidhlig medium units in the primary schools of Stafainn (in 2000/2001: 25 pupils), Cill Mhoire (18 pupils) and Dùn Bheagain (18 pupils). Trondairnis accordingly had 43 GME primary pupils (out of 144 children), this meant $29.9 \%$. In reality, the percentage was rather higher because a substantial number of pupils in southern Trondairnis went to the GMU in nearby Port Righ rather than attending the English-medium MacDiarmaid primary school. In addition, there was some second language teaching to other primary school children but seemingly with rather limited success. Even here in this traditionally stronghold of the Gaiddhlig language on the island just under $50 \%$ of primary school children could speak it. They came almost exclusively from the Gàidhlig medium classes in Stafainn, Cill Mhoire and Port Righ.

In Diùirinis \& Minginis the picture was rather different. There existed only one GMU in Dùn Bheagain which was attended by 18 pupils in the 2000/2001 school year (out of 182 children in the whole area); this meant $9.9 \%$ of the total primary school age population. The other pupils received some second language tuition with varying degrees of intensity. The highest returns came from An Cnoc Breac (Knockbreck) on the Bhàtairnis peninsula.

- Secondary school children: All pupils attended Portree High School for secondary education. In the S1 and S2 stages Gàidhlig was compulsory with children learning either as "fluent speakers" or as "learners". 70 pupils of 241 were classified as "fluent speakers" at this time for the whole island. In the north-western part of An t-Eilean Sgitheanach census returns were generally very high for this age group with Trondairnis showing especially respectable percentages.
- Parents: Overall, the knowledge of Gàidhlig in the "parental generation" was on a comparable level with those of the primary school children. There was, however, still less Gàidhlig around in the pre-school age group than might be expected. In addition to the commendable efforts of cròileagan and sgoiltean araich there was much room for improvement in intergenerational language maintenance.

| Knowledge of Gàidhlig (Census 2001) in Selected Primary School Catchment Areas |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Primary School(s) | "Pre-SchoolAge 0-4 |  | "Primary" Age 5-11 |  | $\begin{gathered} \hline \text { "Secondary" } \\ \text { Age 12-15 } \\ \hline \end{gathered}$ |  | 'Parents'" <br> Age 25-34 |  |
| Stafainn (Staffin) | 13 | 33.3 \% | 33 | 66.0 \% | 24 | 88.9 \% | 49 | 66.2 \% |
| Cill Mhoire (Kilmuir) | 4 | 40.0 \% | 17 | 50.0 \% | 7 | 50.0 \% | 10 | 40.0 \% |
| Uige (Uig) | - | - | 12 | 42.9 \% | 9 | 81.2 \% | 17 | 65.4 \% |
| Mac Diarmaid (Mac Diarmaid) | 11 | 20.4 \% | 39 | 50.0 \% | 36 | 83.7 \% | 52 | 54.2 \% |
| An t-Aodann Bàn (Edinbane) | 6 | 28.6 \% | 5 | 17.2 \% | 1 | 25.0 \% | 14 | 63.6 \% |
| An Cnoc Breac (Knockbreck) | 2 | 22.2 \% | 13 | 50.0 \% | 11 | 68.8 \% | 4 | 26.7 \% |
| Dùn Bheagain (Dunvegan) | 6 | 14.6 \% | 25 | 39.7 \% | 33 | 86.8 \% | 25 | 40.3 \% |
| Borrodail (Borrodale) | - | - | 3 | 30.0 \% | 9 | 47.4 \% | 2 | 18.2 \% |
| An t-Sruthan (Struan) | 4 | 26.7 \% | 9 | 31.0 \% | 14 | 66.7 \% | 13 | 44.8 \% |
| Carbost (Carbost) | - | - | 8 | 25.8 \% | 16 | 66.7 \% | 12 | 24.5 \% |

Table 12: Number and percentage of people with knowledge of Gàidhlig in selected age groups for primary school catchment areas according to the census 2001

In essence it was obvious that the recent strong growth in intensive language tuition via Gàidhlig medium education has had considerable success in producing fluent Gàidhlig speakers. This positive result
was somewhat masked by an unsatisfactory provision of second language teaching in primary schools (especially compared with 1991 when visiting teachers covered all pupils in the area). This effect is most pronounced in Diùirinis \& Minginis where Gàidhlig medium did not take off as effectively as in Trondairnis.

## 4 Future Perspectives: 2011 and beyond

Information about Gàidhlig-speakers enumerated in 2011 and their associated language skills can also be used to some extent to look at the basic foundations which future language development must consider. Since 2001 the language viability indicator $\left(\mathrm{LVI}^{21}\right)$ turned positive in the north-east of Skye, but it was still slightly negative in the westerly parts of the island. The latter fact points to less than sufficient intergenerational language-maintenance (table 13) in Düirinis \& Minginis.

| Area | Trondairnis, Diùranais \& Minginis - Census 2011 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Knowledge of Gàidhlig |  |  |  |  | Gàidhlig as home language (\% of speakers) |
|  | Young age(3-15) |  | All ages |  | Difference (Language viability indicator) |  |
| Trondairnis (Trotternish) | 129 | 66.5\% | 762 | 48.9\% | + 17.6 \% | 73.3 \% |
| Diùirinis \& Minginis (Duirinish \& Minginish) | 118 | 31.5\% | 918 | 31.6\% | - 0.1 \% | 54.8 \% |
| In comparison: <br> Gaidhealtachd (Highland) |  | 7.3 \% |  | 7.4 \% | - 0.1\% | 45.1 \% |

Table 13: Intergenerational viability and Gàidhlig as home language in Trondairnis (Trotternish) and Diùirinis \& Minginis (Duirinish \& Minginish) in comparison with the whole Gaidhealtachd (Highland) local authority according to census data of 2011

Locally the LVI was slightly positive everywhere except for a few locations. Intergenerational viability was especially healthy in Trondairnis with strongly positive LVI values for Stafainn ( +18.9 \%) and Cill Mhoire, Uig \& Earlais ( $+16.2 \%$ ). On the other hand, the three data zones in the parish of Diuirinis did show rather neutral values. The only very negative result was returned from the data zone Carbost \& Fiosgabhaig (- 9.0 \%) in Minginis. The knowledge of Gàidhlig in younger age-groups (table 7) is also somewhat higher in Trondairnis than in most locations in Diùirinis \& Minginis.

Future educational progress: The overall temporal evolution of Gàidhlig-medium primary education is depicted in fig. 14 for the period 1992-2023. For example, in the 2023-24 session 29 pupils ( $78.4 \%$ ) attended the GMU in Stafainn, 11 pupils in the GMU in Cill Mhoire ( 64.7 \%), and 23 pupils ( $51.1 \%$ ) were recorded in the Dùn Bheagain GMU. The corresponding numbers of nursery children stood at 3, 5 and 12 children respectively. The remaining pupils received second language teaching, mainly for all school stages from P1 to P7.

In conclusion: In the north-western townships of An t-Eilean Sgitheanach prospects for the maintenance of Gàidhlig as important community language are improving. This is especially the case in Trondairnis where roughly 70 \% of primary school children attend Gàidhlig medium classes. On the other hand, local conditions in Gleann Dail, An t-Aodann Bàn and Minginis as a whole are far less satisfactory and bode not well for the future.

## III. Some Valuable Comments about Census Information

The interpretation of census figures (derived statistics in particular) is not as straightforward as the pure numbers might suggest. The author has taken great pains to compare like with like and the calculated tables with greatest geographical detail and age group information as possible. But the differences of census questions, enumeration districts and information details between years are quite substantial. It is therefore very important to notice the following facts:

1. Questions on Gàidhlig have been raised in census enumerations in Scotland since 1881. In this first instance, however, it was asked whether the person "speaks Gaelic habitually" and the information was provided by the enumerator. From 1891 onwards this wording was changed into "speaks Gaelic" and the information was given by the head of the household. Accordingly direct comparison of the results of 1881 and later years is not possible.
2. Until 1971 it was asked whether the person "speaks Gaelic and English" or "speaks Gaelic but not English" (Gaelic only). Due to the simple necessity to survive in an English dominated society and the considerable impact of the school system in fact all Gàidhlig-speaking people were forced to become bilingual - with the notable exceptions of pre-school children and very old people. These "Gaelic only" persons did not, however, present those who had Gäidhlig as their natural and preferred language nor were they the only mother tongue speakers. This was already highlighted after the census 1911 by comments given by the then registrar general and the superintendent of statistics in the county report on Inverness (Census Office, Scotland, 1912): „When discussing the statistics of the Gaelic-speakers of Argyll we expressed an opinion that the reduction in the number of persons speaking Gaelic but unable to speak English should not be taken as a proof that the use of the language was being discontinued, and after making a similar study of statistics of the Gaelicspeakers of the islands of Inverness, we are in a position to repeat that opinion. One fact alone seems to justify such an expression, and that is that fully three-fourths of the children of less than school age, more than three but less than five, speak Gaelic exclusively. Such a condition seems possible only when Gaelic is the language habitually spoken in the homes, and this seems conclusive evidence of its wide and habitual use." Due to the ever-increasing presence of English in the Gàidhlig community (mixed language marriages, in-migration of English only speakers, radio and television) more and more children under the age of 5 became bilingual and the census question proved to be irrelevant after the $2^{\text {nd }}$ World War. Because of the very small numbers involved and the ambiguity of the question no census enumeration took place after 1971 on persons who spoke Gàidhlig but no English.
3. No data are available on persons speaking Gàidhlig outside Scotland in the rest of the United Kingdom. Census returns are, however, recorded in Canada where the Gäidhlig language survived as a community language in a few locations of the province of Alba Nuadh (Nova Scotia) well into the 1940s.
4. During Word War II no census was taken. Therefore, no figures are available for 1941.
5. In 1971 the wording was changed from "speaks Gaelic" into "is able to speak Gaelic". This resulted in areas with low density of speakers in a substantial increase of Gàidhlig-speakers counted compared with 1961. These were essentially those who could speak Gàidhlig but did not have the opportunity to use it. In strongly Gàidhlig-speaking areas those who were able to speak Gàidhlig were also using the language. So in the islands and on the western seaboard the figures should have remained comparable with previous censuses.
6. In 1981 the population basis was changed from persons present on census night to usually resident persons. In the light of increased mobility of the population this change was inevitable.
7. From 1971 onwards additional questions were asked on the ability of people to read Gàidhlig or to write Gàidhlig.
8. In 2001 another question was introduced on the ability of a person to understand spoken Gàidhlig. This may have had an influence on some people with only a small command of the language to record themselves as being able to understand rather than able to speak the language. Without this choice some of them might have enlisted themselves or their children as Gàidhlig-speaking to be counted at all. This may explain the small decrease of speakers in the age group of 3 to 4 despite the strong efforts by the croileagan movement in the preceding decade.
9. Additionally in 2001 for the first time all children under the age of 3 were recorded with their knowledge of Gàidhlig. In previous enumerations these children were not counted or (in 1891 and 1901) only a few children were enumerated in this age group. In many census publications percentages were calculated by using the enumerated Gàidhlig-speaking population (aged 3 years and over) on the basis of the total population. This led to slightly lower percentages than actually existed.
10. Census counts are not strictly exact. Apart from inevitable small enumeration errors the census authorities have introduced measures to keep returns anonymous. For example in 1971 figures in tables were rounded to the nearest 0 or 5 . This fact represented a major obstacle in using small area statistics for further evaluation because of the small numbers involved. Comparable measures were taken in later censuses but with smaller overall "uncertainties" of $+/-1$ in general.

## V. List of Tables

## REPORT

1 Number of Gàidhlig-speakers (3 years and over) in Trondairnis, Diùirinis \& Minginis (Trotternish, Duirinish and Minginish) and percentage of total population speaking Gàidhlig 18811931
2 Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Cill Moire \& Steinnseal according to local census data from 1881 to 1911
3 Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Sniosart according to local census data from 1881 to 1911
4 Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in Diùirinis \& Bhàtairnis according to local census data from 1881 to 1911
5 Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population in 13 Bràcadal \& Minginis according to local census data from 1881 to 1911
6 Number of Gàidhlig-speakers (3 years and over) in Trondairnis, Diùirinis \& Minginis (Trotternish, Duirinish and Minginish) and \% of total population speaking Gàidhlig 1951-2011
7 Intergenerational viability and Gàidhlig as home language in selected census data zones in comparison with the whole Gaidhealtachd (Highland) local authority according to census data of 2011
8 Number of people able to read Gàidhlig and Gàidhlig readers as a percentage of Gàidhlig20 speakers for both areas (1971-2011)
9 Number of people able to write Gàidhlig and Gàidhlig writers as a percentage of Gàidhlig- 20 speakers for both areas (1971-2011)
10 Knowledge of Gàidhlig in younger age groups in Trondairnis (Trotternish) in 2001 and 1991
11 Knowledge of Gàidhlig in younger age groups in Diùirinis \& Minginis (Duirinish \& Minginish) in 2001 and 1991
12 Number and percentage of people with knowledge of Gàidhlig in selected age groups for primary school catchment areas according to the census 2001
13 Intergenerational viability and Gàidhlig as home language in Trondairnis (Trotternish) and 29 Diùirinis \& Minginis (Duirinish \& Minginish) in comparison with the whole Gaidhealtachd (Highland) local authority according to census data of 2011
14 Number of Gàidhlig-speakers (aged 3 years and over) for the four civil parishes in Tron31 dairnis, Diùirinis \& Minginis according to census data from 1881 to 2001
15 Gàidhlig-speakers (aged 3 years and over) as percentage of total population for the four civil 31 parishes in Trondairnis, Diùirinis \& Minginis according to census data from 1881 to 2001
16 Number of persons speaking Gàidhlig between 1881 and 1901 - selected areas (civil parishes, census registration districts, electoral areas or inhabited islands)
17 Number of persons speaking Gàidhlig between 1911 and 1971 - selected areas (civil parishes 33 or county council electoral divisions)
18 Percentage of persons speaking Gàidhlig but no English (aged three years +) for different age34 groups in island parishes of former Inverness-shire according to census data from 1891 to 1931
19 Number of persons speaking Gàidhlig and all Gàidhlig-speakers as share of population (aged three and over) for pre-1975 county council electoral divisions according to census data from 1961 to 2001
20 Population with Gàidhlig knowledge in output areas of Trondairnis (Trotternish) according to age group and birthplace in 1981
21 Population with Gàidhlig knowledge in output areas of Diùirinis \& Minginis (Duirinish \& Minginish) according to age group and birthplace in 1981
22 Number and percentage of Gàidhlig-speakers for the census output areas in Trondairnis (Trotternish) according to data from 1981 to 2001
23 Number and percentage of Gàidhlig-speakers in different age groups in Trondairnis (Trotter37 nish) between 1971 and 2001
24 Number and percentage of Gàidhlig-speakers for the census output areas in Diùirinis \& ..... 38Minginis (Duirinish \& Minginish) between 1981 and 200125 Number and percentage of Gàidhlig-speakers in different age groups in Diùirinis \& Minginis 39(Duirinish \& Minginish) according to data from 1971 to 2001
26 Intergenerational viability and Gàidhlig-speakers born in Scotland in Trondairnis (Trotter- ..... 39nish) according to census data of 2001
27 Intergenerational viability and Gàidhlig-speakers born in Scotland in Diùirinis \& Minginis ..... 40(Duirinish \& Minginish) according to census data of 2001

## ANNEXES

A-2 List of locations within individual census output areas and official numbers for different cen- ..... 55 sus dates for Diùirinis \& Minginis (Duirinish \& Minginish) - 1961-2001

## VI. List of Figures

## REPORT

1 Overview map of the study area 6
2 Gàidhlig-speakers (aged 3 and over) as percentage of total population between 1881 and 20117

- civil parishes of Cill Mhoire (Kilmuir), Sniosart (Snizort), Diùirinis (Duirinish) and Bràcadal (Bracadale)
3 Share of population speaking Gàidhlig and/or English in the study area according to census 14 results in 1891, 1911 and 1931
4 Percentage of children able to speak, read or write Gàidhlig in different age groups in 1981 - 16 Trondairnis
$5 \quad$ Percentage of children able to speak, read or write Gàidhlig in different age groups in 1981 - 16 Diùirinis \& Minginis
$6 \quad$ Percentage of Gàidhlig-speakers in different age groups between 1971 and 2001 - Area of 17 Trondairnis (Trotternish)
$7 \quad$ Percentage of Gàidhlig-speakers in different age groups between 1971 and 2001 - Area of 18 Diùirinis \& Minginis (Duirinish \& Minginish)
8 Persons able to read Gàidhlig as a percentage of Gàidhlig-speakers on Trondairnis in different 20 age groups (1971-2001)
9 Persons able to read Gàidhlig as a percentage of Gàidhlig-speakers on Diùirinis \& Minginis in 21 different age groups (1971-2001)
10 Percentage of population able to understand or speak Gàidhlig and year of birth - area of 23 Trondairnis (Trotternish) according to Census 2001
11 Share of population living in neighbourhoods (census output areas) with different intensity of 24 language knowledge in Trondairnis (Trotternish)
12 Percentage of population able to understand or speak Gàidhlig and year of birth - area of 25 Diùirinis \& Minginis (Duirinish \& Minginish) according to Census 2001
13 Share of population living in neighbourhoods (census output areas) with different intensity of 26 language knowledge in Diùirinis \& Minginis (Duirinish \& Minginish)
14 Share of primary school children attending Gàidhlig-medium classes in Trondairnis and 30 Diùirinis \& Minginis (September 1992 - September 2023)
15 Overview map of census output areas in Trondairnis and Diùirinis \& Minginis

## VII. List of Abbreviations

There are a number of abbreviations used in the text which might not be known by every reader. Therefore this short list intends to facilitate better understanding:

| CCED | County council electoral division |
| :--- | :--- |
| CP | Civil parish |
| CNSA | Comhairle nan Sgoiltean Araich: Gaelic playgroup association |
| Comhairle nan Eilean | Official name of the Western Isles Council, the local government body of <br> (CNE) - later: <br> Comhairle nan Eilean Siar |
| the Outer Hebrides (with abbreviations) |  |
| (CNES) |  |
| Croileagan | Gaelic speaking playgroup |
| Fèis | Local art festival with normally some Gaelic courses |
| GLPS | „Gaelic Language for the Primary School": Course as introduction of |
|  | Gaelic as second language |
| GME | Gàidhligg-medium education <br> GMU |
|  | Garidhlig-medium unit: Class(es) with Gàidhlig-medium education but as <br> prof anglish medium school |
| LVI | General Register Office for Scotland |
| LCI | Language viability indicator |
| Mòd | Language community indicator |
|  | Gaelic language gathering (conversation, song and music) comparable to |
| n/a | the Welsh Eisteddfod |
| OA | Information is not available |
|  | (Census) output area: the smallest enumeration unit on which census data |
| P1 | are available |
| P2 | Primary school year 1 |
| S1 | Primary school year 2 |
| S2 | Secondary school year 1 |
| Sgoil Araich | Secondary school year 2 |
| Srádagan | Gaelic speaking nursery school |
| Vi | Gaelic speaking clubs for primary school children |

[^0]:    ${ }^{1}$ Original census data shown or used were supplied and/or published by the General Register Office for Scotland. The use of this material in this study is permitted under Licence No. C02W0003665. Crown Copyright of census data is acknowledged.
    ${ }^{2}$ Tables were extended with more census results of enumeration districts provided for 1881, 1891, 1901, 1911 and 1981.

[^1]:    ${ }^{3}$ Digital boundaries courtesy of Ordnance Survey as part of Geography Products provided by GROS for the 2001 census.

[^2]:    ${ }^{4}$ There was no census taken in 1941 because of World War II - values are therefore interpolated between 1931 and 1951.

[^3]:    ${ }^{5}$ After a period of 100 years information provided on the original census forms is publicly available. At the time of writing this is already the case for census returns of 1881, 1891, 1901 and 1911.

[^4]:    ${ }^{6}$ Enumeration division.
    ${ }^{7}$ Percentages of Gàidhlig-speakers above $50 \%$ are marked by bold figures.
    ${ }^{8}$ Percentages of monolingual Gàidhlig-speakers above $10 \%$ are marked by bold figures.

[^5]:    ${ }^{9}$ Enumeration division.
    ${ }^{10}$ Percentages of Gàidhlig-speakers above $50 \%$ are marked by bold figures.
    ${ }^{11}$ Percentages of monolingual Gàidhlig-speakers above $10 \%$ are marked by bold figures.

[^6]:    ${ }^{12}$ Enumeration division.
    ${ }^{13}$ Percentages of Gàidhlig-speakers above $50 \%$ are marked by bold figures.
    ${ }^{14}$ Percentages of monolingual Gàidhlig-speakers above $10 \%$ are marked by bold figures.

[^7]:    ${ }^{15}$ Enumeration division.
    ${ }^{16}$ Percentages of Gàidhlig-speakers above $50 \%$ are marked by bold figures.
    ${ }^{17}$ Percentages of monolingual Gàidhlig-speakers above $10 \%$ are marked by bold figures.

[^8]:    ${ }^{18}$ Under 5: Gàidhlig abilities in the age group 3-4 until 1991, in 2001 in all age groups 0-4.

[^9]:    ${ }^{19}$ Persons able to understand spoken Gàidhlig and/or able to speak, read or write Gàidhlig.

[^10]:    ${ }^{20}$ Persons able to understand spoken Gàidhlig, or able to speak, read or write Gàidhlig.

[^11]:    ${ }^{21}$ LVI: The "Language Viability Indicator" is a measure of the prospective reproductivity of language speakers in a community. It is here defined on the basis of knowledge of Gaidhlig in the census and is calculated by the difference of percentages between the age group below 16 years of age and the total population.

[^12]:    ${ }^{22}$ Gaelic Dept, University of Strathclyde.

[^13]:    ${ }^{23}$ The 1881 census question was concerned with "habitually" speaking Gaelic.

[^14]:    ${ }^{24}$ The figures should read "between 2,739 and 2,751 Gaelic and English" and "between 14 and 26 Gaelic only" respectively because census figures were rounded to the nearest five in the 1971 census report.
    25 "Gaelic only" returns are in particular approximate. They are deduced from the difference between results for civil parishes and those for electoral divisions given in the 1971 census report. The totals for civil parishes included the returns of monolingual Gàidhlig speakers although it was not intended by the publishers.

[^15]:    ${ }^{26}$ Islands of Barraigh (Barra), Uibhist (Uist), Na Hearadh (Harris), An t-Eilean Sgitheanach (Skye) and Na h-Eileanan Tarsuinn (Small Isles).

[^16]:    ${ }^{27}$ Figures may not add up exactly because of measures to keep returns anonymous.
    ${ }^{28}$ A more detailed list of all locations in each output area is to be found in section IV.
    ${ }^{29}$ Scottish born population aged 3 years and over.

[^17]:    ${ }^{30}$ Figures may not add up exactly because of measures to keep returns anonymous.
    ${ }^{31}$ A more detailed list of all locations in each output area is to be found in section IV.
    ${ }^{32}$ Scottish born population aged 3 years and over.

[^18]:    ${ }^{33}$ Statistical base is the population aged 3 years and over for 1981 and 1991 and the total population in 2001.
    ${ }^{34}$ Information on data for individual census output areas may not be available for every census to prevent the disclosure of individuals. A more detailed list of all locations in each output area is to be found in section IV.
    ${ }^{35}$ Additional approximated returns on "Gaelic only" in brackets. Speakers of Gàidhlig but not English in 1971 are distributed in age groups according to general distribution for the counties of Inverness-shire and Ross \& Cromarty.
    ${ }^{36}$ Information only available since 2001.

[^19]:    ${ }^{37}$ Statistical base is the population aged 3 years and over for 1981 and 1991 and the total population in 2001.
    ${ }^{38}$ Additional approximated returns on "Gaelic only" in brackets.

[^20]:    ${ }^{39}$ Digital boundaries courtesy of Ordnance Survey as part of the Geography Products provided by GROS for the 2001 census.
